404. V. Kolouch and J. Malch, Continuous arches on elastically yielding piers. Theoretical computation compared with results of experimental analysis (in Czech), Techn. (Prav. 57, no. 2, 21-28 (Feb. 1949).

If continuous arches are supported by piers resting on elastically yielding soil, the theoretical analysis of internal forces becomes very intricate and cumbersome. It is shown that a relatively quick solution may be obtained by tests on small-scale models, such as in the Hogg's deformer method, and that the results corroborate the theoretical analysis. A thorough analysis is presented including influence lines of bending moments, direct stress and shear. A simplified method is proposed which yields satisfactory results as compared with both theoretical and experimental analyses.

Title : On the Study of the Development of Cercospora Infection
(in Beets) in Relation to the Prognosis of the Disease

Orig Pub : Listy cukrovarn., 1958, 74, No 3, 53-61

Abstract : Results of the observations conducted for 12 weeks in
1957 in Doksany and Modrzhaný (Czechoslovakia) are
described. The influence of weather conditions on the
development of Cercospora beticola is pointed out.
The fungus infects beets in the presence of humidity
exceeding 90% under artificial conditions or after
precipitation of more than 10 millimeters in the course
of 48 hours. -- From the author's summary

"Analytical Study of Drugs of the Phenothiazine Derivatives Group. III. Gravimetric and Polarographic Determination with Silicotungstic Acid."

Prague, Ceskoslovenska Farmacie, Vol 15, No 7, Sep 66, pp 349-355

Abstract [Authors' English summary modified]: The reaction conditions suitable for gravimetric and polarometric determination of 24 derivatives of phenothiazine and silicotungstic acid were investigated. Optimum conditions for quantitative precipitation are obtained in a 0.1 to 0.5 N-HCl. The stoichiometric ratio of the reagent to that of the base is for derivatives with one active group 1 : 4, with two active groups 1 : 2. For the polarometric determination 20-100 mg of the active substance are dissolved in 20 ml of 0.5N HCl and titrated with silicotungstic acid (0.01M) at - 0.75V against a sat. calomel electrode, using a dropping Hg electrode and a sat. calomel electrode as anodes. Salts of maleinic and fumaric acids are determined at - 0.5 V. 3 Tables, 8 Western, 6 Czech, 1 Polish reference. (Ms. rec. 1 Mar 66).

Title : Chlorpromazine Determination by Gravimetric Method.

Orig Pub : Ceskosl. farmac., 1955, 4, No.5, 246 - 247.

Abstract : Chlorpromazine (largactil, mogaphen, aminozine) is used as antiemetic at narcosis application, in psychiatry, peditry and for the prophylaxis of rheumatic and hemorrhagic shocks. It is used in the form of tablets of 25 mg each, or as a 0.5%~~-ual~~ solution for intramuscular injections and a 2.5%~~-ual~~ solution for intravenous injections. The chlorpromazine determination by the gravimetric method consists in its reaction with silicotungstic acid in HCl (acid) medium. The accuracy of the method is 5%.

pathways in certain pharmaceuticals produced in
Czechoslovakia. J. Hlavak and Z. Stejskal (State
Institute of Drugs, Prague, Czechoslovakia)
J. Pharm. Med. (1977) 13, 1-4
The authors describe a method for the determination of pbenol-¹⁸A in pharmaceuticals produced in Czechoslovakia. The method is based on the polarographic determination of pbenol-¹⁸A in the presence of a suitable reagent. The authors report that the method is sensitive and specific, and that it can be used for the determination of pbenol-¹⁸A in pharmaceuticals produced in Czechoslovakia. The authors also report that the method can be used for the determination of pbenol-¹⁸A in pharmaceuticals produced in other countries.

potentiometric control. The system employs the use of two electrodes (platinum and graphite), which are directly connected to a galvanometer. Approximately 500 mg of a substance is boiled in 100 ml of 12.5% HCl (acid) for 30 minutes. After cooling, the contents are transferred (quantitatively) into a 250 ml graduate followed by the addition of concentrated HCl to a volume of 250 ml. The separated layer is then removed with a pipette, fuming HCl (acid) is added and the mixture is subjected to the potentiometric titration with 0.1 M solution of NaNO_2 . The end point is determined by means of measuring the time of declination of the galvanometer needle. 1 ml of 0.1 M NaNO_2 solution corresponds to 12.41 mg of II, 16.62 mg of IV, 16.408 mg of Na-salt of III, and 15.31 mg of III.

Titration of 4-Hydroxy-3-Acetylamino-Phenyl-
ORIG. PUB. : Ceskosl. farmac., 1958, 7, No 10, 589-590
ABSTRACT : A method has been worked out for determination
of Osarsol (I), which is based on hydrolysis of I in acid
medium, by heating, and a subsequent titration of the
primary aromatic amino group with a solution of NaNO_2 .
250 g I boiled 30 minutes with HCl (acid), cooled and
titrated with 0.1 M NaNO_2 , with potentiometric determination
of titration end point (electrodes -- Pt and graphite).
1 ml 0.1 M NaNO_2 corresponds to 27.513 mg I. Determinations
were made with "Acetylarsan" solutions for injection and
with "Purovagin" tablets. Accuracy of determination 0.1%.

"Achievements of Soviet Pharmacy."

Prague, Ceskoslovenska Farmacie, Vol 11, No 9, Sept 1962; pp 433-437.

Abstract: A review of the development of pharmaceutical education, practice, industry and other aspects in various Soviet republics (e.g. Armenian, Abchaz Autonomous, Kazakh, Georgian, Baltic republics;) based wholly on articles published in the six 1961 and first 2 1962 issues of the Soviet pharmaceutical journal Aptekhnika SSSR, with 20 references therefrom.

TITLE: Determination of the optimum conditions for steel plant operation by the Monte Carlo simulation

SOURCE: Hutnicke listy, no. 8, 1964, 545-551

TOPIC TAGS: mathematic model, industrial furnace, steel, metallurgie industry

ABSTRACT: Optimum working conditions for OH furnaces were determined; particular attention was paid to the melting rate of the entire steel plant, and to the time lost because of the lack of charging cranes. The problem was solved by a mathematical model, which allowed the simulation of several steel plant operations as alternatives. The optimum operating conditions for the plant as is, and after modifications, were determined. Orig. art. has: 4 figures, 3 tables.

TITLE:

The Classical Multidimensional Oscillator

PERIODICAL:

Matematicko-fyzikálny časopis, 1960, Vol. 10, No. 2,
pp. 111-122

TEXT: Previous publications have dealt with the multidimensional, harmonic, isotropic quantum oscillator, and have shown that, besides the well-known conservation theorems, also other laws resulting from the commutative properties of the Hamiltonian with certain quantities apply to this type of oscillator. The present article shows that similar n^2 conservation theorems hold also in the case of the classical multidimensional oscillator, with the conservation quantities being obtained from the first theorem by E. Noether. The first part of the article deals with the formulation of Noether's theorem for a classical system with n degrees of freedom. The second part derives the relations applied to the classical multidimensional oscillator, and, finally, the

Card 1/3

83875

The Classical Multidimensional Oscillator

V/005/60/010/002/002/002
B020/B060

third part refers to the connection between the conservation theorems following from Noether's theorem, on the one hand, and the equations of motion, on the other. It may be said as a final result that the validity of Noether's theorem (24) also comprises the validity of the equations of motion (9). The conservation theorems following from the equations of motion are thus necessarily contained in Noether's theorem (24) (satisfying of the equations of motion is a necessary but not sufficient condition for the validity of Noether's theorem). Some further conservation theorems can thus result from Noether's theorem, which cannot be obtained by integrating the equations of motion. The authors thank M. Petráš and Ľ. Hrivnák, Candidates of Sciences, for having raised the problem and for discussions. There are 5 references: 2 Soviet, 2 US, 1 German, and 1 Italian.

TITLE: One-pole approximation for higher waves and the correct threshold behavior of phase shifts

SOURCE: Matematicko-fyzikalny casopis, no. 4, 1965, 317-330

TOPIC TAGS: approximation, elastic scattering, phase shift analysis

ABSTRACT: The article deals with nonrelativistic elastic scattering. The connection between the number of poles and the correct threshold behavior of the phase shift for a given angular momentum is discussed. Lastly the Jost function approximated by more poles for higher waves is treated. The derivation of potentials and phase shifts is performed by solving the Gelfand-Levitan equation. TITLE: An International Conference on Problems of Division Into Economic Regions

PERIODICAL: Izvestiya Akademii nauk SSSR, Seriya geograficheskaya, 1959, Nr 5, pp 117-120 (USSR)

ABSTRACT: The above mentioned conference took place on 29 May - 1 June 1959 in Kasimiers Dolny (Poland). In the second part the following Polish geographers reported on different economic problems of division into economic regions: S. Kafkowaka - on workers' commuting in the Krakow wojewodstwo; M. Dobrowoloka - on the influence of industrialization on the formation of regions and on the types of inhabited centers; L. STRAZEMICA - on the analysis of the bases of principles of development of economic regions as shown by the example of study of the Lodz industrial district; A. Wróbel - on the joint regions of passenger transportation in Poland; and L. Kosiński - on the study of the sphere of influence of Polish small towns. Other reports were read by: Professor Ya. Koryak (Czechoslovakia) - on "Immigration Basis of Czech Towns"; Kh MARINOV (Bulgaria) on "Methods of Study of Economic Connections and Inter-regional Exchange"; M. Blazek (Czechoslovakia) - on "Problems of Development of Weakly Developed Rayons of the Plesk Region"; G. Szudi (Hungary) on a "Method of Delimitation of Agricultural Regions"; and G. Schmidt-Bannar (S. Germany) on the "Problems of Regional Economics". Reports were also read by G. Tulipe (Belgium) and K. Schneider (W. Germany). Finally the last report on "The Economic Region in Economic Geography and in Perspective Planning" was read by Professor K. DANKOWSKI in which he tried to establish basic elements of planning and to generalize some of the problems of division.

TITLE: Method of removing low-molecular fractions from molten polycapron amide (polycaprolactam)

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 13, 1962, 656, abstract 13P396 (Czechoslovak patent 94671, March 15, 1960)

TEXT: The method consists of passing a stream of inert gas at atmospheric pressure around a film of the molten polyamide as it flows over a surface at 220-300°C. Since the rate of diffusion of the low-molecular fractions into the inert gas is considerably lower under these conditions than the depolymerization rate of the polyamide their content in the melt is sharply reduced. The purified melt can immediately be used in the production of fibers. The risk of the polyamide being oxidized is reduced, the equipment for the purification process is simpler and its cost is lower. Example: The molten polyamide is metered at 6.5 g/min onto a cylindrical surface 450 mm high and of 50 mm diameter, heated to 260°C, and flows over this as a film. Nitrogen containing no oxygen is introduced into the

EXCERPTA MEDICA Sec.3 Vol.12/5 Endocrinology May 1958

889. **BLAZEK O.** STRATIGRAPHICAL DIAGNOSIS OF HYPOPHYSEAL ADENOMAS - Strati-
graphische Diagnostik der Hypophysenadenome - Silinková - Málková
E. and **Blazek O.** III. Med. Klin., Karls-Univ. Prag - ENDOKRINOLO-
GIE 1957, 34/1-2 (2-11)

A technique of extensive stratigraphical examination of the sella turcica, which is cheap, simple and convenient to the patient, is described. This technique ensures a correct spatial image in normal and also in pathological conditions and has proved efficacious especially for the diagnosis or the removal of hypophyseal tumours. The objective picture of all the sellar changes permits an early diagnosis. Comparative stratigraphy in the further pathological course facilitates judgment of the dynamics of the process. The clinical characteristics and the typical X-ray findings obtained by stratigraphy in 56 cases of hypophyseal adenoma are presented.
